

## WHY IS IT GOOD FOR ANIMALS?

*Linseed meal for animals is an alternative way of feeding all the goodness of linseed oil which will improve coat, condition and help maintain good general health and supple joints.*

*In addition to the oil, it also supplies high levels of essential amino acids and lignan, a health promoting substance.*

*The advantage of linseed meal is that it's ready to add straight away to daily feed - no need to boil and prepare the seeds yourself.*

*It also has a long shelf life making it a real value-for-money purchase.*

*Omega-3, which Marriage's linseed is high in, is also needed to support an animal's body's healing processes after an injury - which in itself can deplete it's reserves of this EFA.*

*Supplementing food with linseed can help with many conditions including relieving arthritic and inflammatory pain, increasing bone strength and improving skin and coat condition.*

### Benefits of Feeding Linseed

- Heal & soothe dry, irritated skin
- Improve your pet's coat giving it a beautiful glossy sheen
- Build their immune system & help fight infections
- Help your pet during its growth & development
- Help improve bone strength
- During lactation, the quality & quantity of the animal's milk will be improved
- Prevention & treatment of inflammatory conditions, including arthritis

### Why Marriage's Specialist Foods?

Marriage's Specialist Foods are based in Alford, Lincolnshire.

Marriage's linseed is UK sourced. As well as reducing the food miles; linseed is an important component in farmer crop rotation allowing farmers to reduce chemical use and farm naturally.

#### NOPS

If you wish to feed linseed as part of a racing or competing animal's diet, you can rest assured Marriage's runs the world most comprehensive NOP's scheme for linseed meal, ensuring all known risks are comprehensively managed.

## FULL FAT COOKED LINSEED MEAL

*Linseed meal is fast becoming considered a super food and it's growth has spread from human food to competition animal and pet foods. Golden linseeds are a powerhouse of nutrition and are rapidly becoming staple in main stream and health foods for our pets and livestock.*

**Marriages Linseed Pack Sizes  
25kg & 3.5kg (4 per case)**

Linseed or flaxseed as it's also known, is one of the most nutritionally dense foods in the world and can be used as a good source of vitamin B6, iron, zinc, calcium, protein, potassium, magnesium, folate, soluble fibre and even boron, a vital trace mineral that is required for the normal growth and health of the body.

Linseed is often preferable to other sources of fatty acids as the seeds have higher fibre content at 40%, making it a great ingredient in many pet and horse foods when the animal is on a low carbohydrate diet. It's non heating whilst still providing slow release energy.

This unique nutritional profile also makes it useful in diets associated with weight loss and is gluten free. It has very low starch levels and is low in sugars.

Another feature of linseed is its lignans. Lignans are fibre-like compounds, but in addition to their fibre-like benefits, they also provide antioxidant protection.

Marriages linseed is micronized which not only enhances the palatability and makes it easily digested but also makes it safe to be fed to horses and livestock.

### Digestion – linseed will help keep it healthy

If food is not able to be digested, then the animal does not usually benefit from any nutrients the feedstuff contains.

A healthy digestive tract is essential if an animal is expected to benefit from the nutrients in their feeds.

### SPECIFICATIONS

Omega 3:	21%
Crude Protein:	21.8%
Oil:	37.30%
Crude Fibre:	17.6
Sugar:	1.99%
Starch:	10.9%
